

Molecular Biologist

Enumeral seeks an individual with experience in molecular biology techniques to join our Discovery Group, which is focused on the identification and development of novel agents for the treatment of cancer, autoimmune and infectious disease. You will work as part of a small multidisciplinary team and will be expected to participate in the design and hands on conduct of experiments. Your contributions will also require excellent organizational and communication skills as well as management of projects with external contract laboratories.

Scientific responsibilities include, but are not limited to:

- Single cell mouse and human RT/PCR, qPCR and gene expression analysis
- Sequencing
- E. coli cloning
- Primer design
- Transient transfections
- Cell line maintenance
- Small-scale protein purification
- ELISAs
- Maintaining detailed records of data
- Communicating results in both written and verbal form

Requirements for this position are a B.S. or M.S. in molecular biology or equivalent experience working with molecular biology techniques. Three years of industry experience are also required
